

## The Steps of Installation (Embedded type front door)

1. Remove the waterproof plug from the Sheet metal of the door.

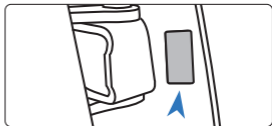

2. Embed the door warning light into the waterproof plug.

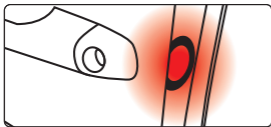

3. Confirm the door warning light is steady and flashes normally.

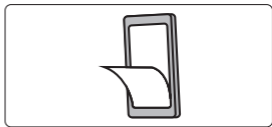

4. In the rear door, find the corresponding position in the door shaft for the magnet to be attached.

5. If the light is not working normally, put the magnet beside of door plate.

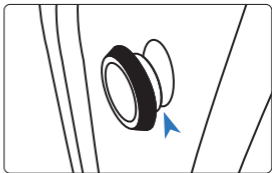

6. Check that the door warning light is working normally when door closes and opens.

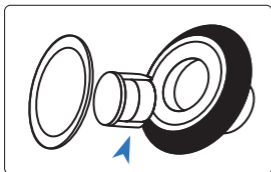

7. Clean the surface of attached place with alcohol or stain-remover. And remove sticker of the magnet to paste it in the corresponding position. Complete the installation.

## How to replace the battery

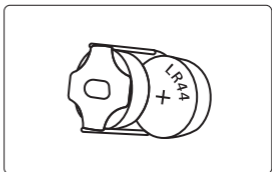

※Please remove the insulation tape before installation.

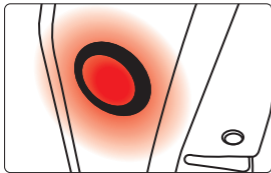

1. Remove the product.

2. Take out the bottom cover and above cover and motherboard.

3. Replace the new battery type LR44. Make sure the battery polarity is reserved and the LED starts to flash.

4. Test function and complete.
